- ✓ The **ONLY** stainless steel tank rated **10 bar discharge pressure**
- ✓ Indoor or Outdoor
- ✓ 10 year Warranty
- ✓ Solar and Heat Pump Ready
- ✓ MEPS compliant

Your Local Accredited Installer:

EDWARDS V Series

The Toughest Stainless Steel Hot Water Cylinder

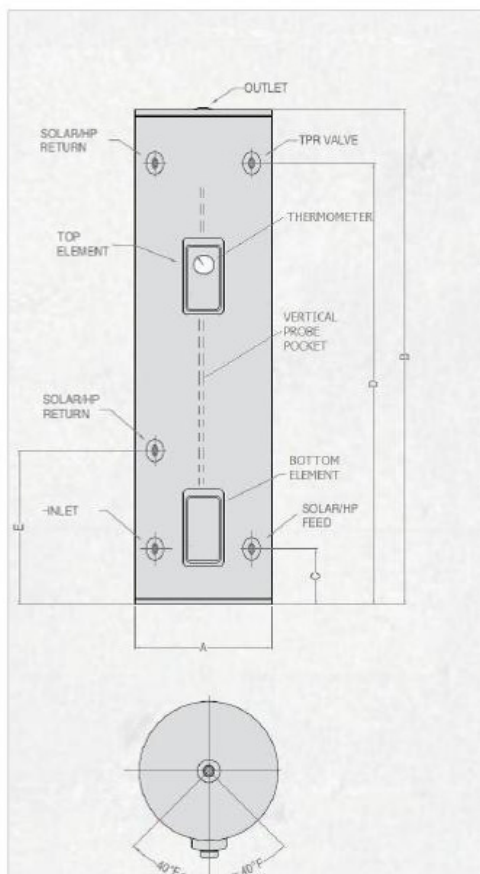

Introducing the Edwards V series, the most advanced stainless steel tank on the market.

Designed to the highest quality standards, it is capable of working with the highest temperatures and pressures (1,000kPa TPR).

In addition, it comes with two elements controlled by an auto-reset thermostat which makes it ideal as a solar or a heat pump tank. To ensure accuracy of temperature, a visual mechanical thermometer and vertical probe pockets are fitted.

For ease of installation, additional solar and heat pumps ports are available. It is light weight and easy to carry into the final position. Even better, if your cupboard space is precious to you – install it outdoors, out of sight.

Our comprehensive 10-year warranty - a piece of mind for years to come.
